Narayani Vedam

2023-08-26

Welcome! Hope you have watched the lecture videos and followed the instructions in code-along. Go through the steps described below, carefully. It is totally fine to get stuck - ASK FOR HELP; reach out to your friends, TAs, or the discussion forum on Canvas.

Here is what you have to do,

- 1. Pair with a neighbor and work
- 2. **Download** the Challenge-3.pdf and Challenge-3.Rmd from Canvas
- 3. **Move** the downloaded files to the folder, "Week-3" that you created previously
- 4. **Set** it as the working directory
- 5. **Edit** content in Challenge-3.Rmd wherever indicated following instructions in Challenge-3.pdf
- 7. **Ensure** that echo=TRUE so that the code is rendered in the final document

6. **Remember** to set eval=TRUE in the code chunk to generate the output

- 8. Code output may not be required in all cases, use your discretion
- 9. **Inform** the tutor/instructor upon completion
- 10. Submit the document on Canvas after they approve
- 11. **Attendance** will be marked only after submission

12. Once again, **do not hesitate** to reach out to the tutors/instructor, if you are stuck

### I. Questions **Question 1: Emoji Expressions**

Imagine you're analyzing social media posts for sentiment analysis. If you were to create a variable named "postSentiment" to store the sentiment of a post using emojis (😄 for positive, 😐 for neutral, 😥 for negative), what data type would you assign to this variable? Why? (narrative type question, no code required) Solution: Delete this text and insert your answer here

**Question 2: Hashtag Havoc** 

In a study on trending hashtags, you want to store the list of hashtags associated with a post. What data type would you choose for the variable "postHashtags"? How might this data type help you analyze and categorize the hashtags later? (narrative type question, no code required) Solution: Delete this text and insert your answer here

**Question 3: Time Traveler's Log** 

each interaction? Explain your choice (narrative type question, no code required)

would you assign to the variable "preferredChannel"? (narrative type question, no code required)

#### You're examining the timing of user interactions on a website. Would you use a numeric or non-numeric data type to represent the timestamp of

Solution: Delete this text and insert your answer here **Question 4: Event Elegance** 

You're managing an event database that includes the date and time of each session. What data type(s) would you use to represent the session

date and time? (narrative type question, no code required)

## Solution: Delete this text and insert your answer here

**Question 5: Nominee Nominations** You're analyzing nominations for an online award. Each participant can nominate multiple candidates. What data type would be suitable for storing the list of nominated candidates for each participant? (narrative type question, no code required)

**Question 6: Communication Channels** 

Solution: Delete this text and insert your answer here

## In a survey about preferred communication channels, respondents choose from options like "email," "phone," or "social media." What data type

Solution: Delete this text and insert your answer here

**Question 7: Colorful Commentary** 

# What data type would you choose for the variable "feedbackColor"? (narrative type question, no code required)

Solution: Delete this text and insert your answer here **Question 8: Variable Exploration** 

Imagine you're conducting a study on social media usage. Identify three variables related to this study, and specify their data types in R. Classify

In a design feedback survey, participants are asked to describe their feelings about a website using color names (e.g., "warm red," "cool blue").

#### each variable as either numeric or non-numeric.

Solution: Delete this text and insert your answer here **Question 9: Vector Variety** 

Create a numeric vector named "ages" containing the ages of five people: 25, 30, 22, 28, and 33. Print the vector.

## **Solution:**

# Enter code here

#### **Question 10: List Logic**

#### Construct a list named "student\_info" that contains the following elements:

• A character vector of student names: "Alice," "Bob," "Catherine" • A numeric vector of their respective scores: 85, 92, 78

- A logical vector indicating if they passed the exam: TRUE, TRUE, FALSE
- Print the list.

**Solution:** 

# # Enter code here

**Question 11: Type Tracking** 

#### You have a vector "data" containing the values 10, 15.5, "20", and TRUE. Determine the data types of each element using the typeof() function. **Solution:**

# Enter code here

**Question 12: Coercion Chronicles** 

# the updated vector.

You have a numeric vector "prices" with values 20.5, 15, and "25". Use explicit coercion to convert the last element to a numeric data type. Print

# **Solution:**

# Enter code here

#### **Question 13: Implicit Intuition** Combine the numeric vector c(5, 10, 15) with the character vector c("apple", "banana", "cherry"). What happens to the data types of the

combined vector? Explain the concept of implicit coercion.

**Solution:** # Enter code here

### **Question 14: Coercion Challenges** You have a vector "numbers" with values 7, 12.5, and "15.7". Calculate the sum of these numbers. Will R automatically handle the data type

conversion? If not, how would you handle it? **Solution:** 

# Enter code here **Question 15: Coercion Consequences** 

Suppose you want to calculate the average of a vector "grades" with values 85, 90.5, and "75.2". If you directly calculate the mean using the

#### mean() function, what result do you expect? How might you ensure accurate calculation? **Solution:**

### # Enter code here **Question 16: Data Diversity in Lists**

• A character vector: "red", "green", "blue"

Create a list named "mixed\_data" with the following components: A numeric vector: 10, 20, 30

- A logical vector: TRUE, FALSE, TRUE
- Calculate the mean of the numeric vector within the list. **Solution:**
- # Enter code here Question 17: List Logic Follow-up

Using the "student\_info" list from Question 10, extract and print the score of the student named "Bob." **Solution:** 

### # Enter code here **Question 18: Dynamic Access**

Create a numeric vector values with random values. Write R code to dynamically access and print the last element of the vector, regardless of its length. **Solution:** 

**Solution:** 

You have a character vector words <- c("apple", "banana", "cherry", "apple"). Write R code to find and print the indices of all occurrences of the word "apple."

# Enter code here

# # Enter code here

**Question 19: Multiple Matches** 

**Question 20: Conditional Capture** Assume you have a vector ages containing the ages of individuals. Write R code to extract and print the ages of individuals who are older than

# # Enter code here **Question 21: Extract Every Nth**

**Solution:** 

30.

Given a numeric vector sequence <- 1:20, write R code to extract and print every third element of the vector. **Solution:** 

# Enter code here

# # Enter code here

**Question 22: Range Retrieval** 

Create a numeric vector numbers with values from 1 to 10. Write R code to extract and print the values between the fourth and eighth elements. **Solution:** 

**Solution:** 

### **Question 23: Missing Matters** Suppose you have a numeric vector data <- c(10, NA, 15, 20). Write R code to check if the second element of the vector is missing (NA).

# Enter code here **Question 24: Temperature Extremes** 

Assume you have a numeric vector temperatures with daily temperatures. Create a logical vector hot\_days that flags days with temperatures

# **Solution:**

# Enter code here

**Question 25: String Selection** 

above 90 degrees Fahrenheit. Print the total number of hot days.

characters. Print the long fruit names.

Given a character vector fruits containing fruit names, create a logical vector long\_names that identifies fruits with names longer than 6

Given a numeric vector numbers, create a logical vector divisible\_by\_5 to indicate numbers that are divisible by 5. Print the numbers that satisfy this condition.

# **Solution:**

**Question 27: Bigger or Smaller?** You have two numeric vectors vector1 and vector2. Create a logical vector comparison to indicate whether each element in vector1 is greater

**Solution:** 

# Enter code here

**Solution:** # Enter code here

**Question 26: Data Divisibility** 

than the corresponding element in vector2. Print the comparison results.

# Enter code here
